SKILLS

Languages: JavaScript, TypeScript, Java, SQL

Technologies: React, Redux Toolkit, Tailwind CSS, Shaden UI, Micro Frontends (Webpack Module Federation), Node.js, Express.js, REST APIs, WebSockets, Jest, Vitest

Databases & Cloud: MySQL, PostgreSQL, MongoDB, Redis, AWS, GCP, Cloudinary

Tools: Docker, CI/CD (Jenkins), Git, LangChain, RAG, Data Structures & Algorithms, System Design

ACHIEVEMENTS

- **LeetCode Knight** (1959 Contest Rating), ranked in top **3.2%** globally with **990+** solved problems.
- Built and shipped Android apps with **160K+ Play Store downloads**.
- Published open-source **npm libraries** with **3.1K+** downloads, including **SatyaMark** (AI content verification) and **PDF & PPT Export** (React utility for editable PDF/PPT generation).
- **HackWithInfy Finalist**, selected among thousands of participants nationwide.

EXPERIENCE

Infosys | *Specialist Programmer – Software Development Engineer*

Aug 2024 – Present

- Built a reusable dashboard export library that converts complex React dashboards into fully editable PowerPoint and PDF documents, adopted across 7+ projects by 3 teams and reducing report creation from hours of manual slide preparation to a single export action.
- Developed an AI-powered PDD generation platform that transforms meeting transcripts and videos into structured Process Design Documents, reducing document creation time from hours or days to under 5 minutes.
- Architected and developed micro-frontend applications using React and Webpack Module Federation, enabling independent deployments across teams while reducing API response times by 25% through MySQL query optimization and database indexing strategies.
- Integrated AWS (S3, Parameter Store) and GCP (Cloud SQL, Redis, Cloud Storage) services for application data, configuration management, and cloud infrastructure integration.

SaralTech | *Software Engineer Intern*

Jan 2024 – Jun 2024

- Developed React-based user interfaces for a real-time application, implementing WebSocket-based communication for live updates and state synchronization across connected clients.
- Integrated authentication and session management workflows, improving application security and user access reliability.

PROJECTS

SatyaMark | *Python, Node.js, React, PostgreSQL, Redis Streams, LangChain*

2025

- Built an open-source multi-modal content verification platform combining LLM-based fact-checking (RAG) and AI image detection for content verification.
- Developed distributed verification pipelines using Python, Node.js, Redis Streams, and WebSockets to orchestrate independent AI workers and stream live results.
- Implemented multi-stage LLM workflows for claim extraction, evidence retrieval, scoring, and re-evaluation to improve verification reliability.
- Published a reusable React SDK (**satyamark-react**) with **2.2K+ downloads**, enabling integration of live verification signals into third-party applications.

FUSE | *React, Node.js, PostgreSQL, WebSockets*

2025

- Built a full-stack social platform with category-based content feeds and real-time messaging.
- Implemented WebSocket-based real-time messaging and PostgreSQL-backed APIs for feed generation, post management, and messaging workflows, enabling instant delivery, and optimized query performance.

PipelineX | *React, FastAPI, Python, Graph Algorithms*

2025

- Built a visual workflow engine using React Flow, enabling drag-and-drop pipeline creation with dynamic node validation and DAG-based cycle detection.

EDUCATION

Sinhgad College of Engineering, Pune | *B.E. Computer Engineering*

2020 – 2024
