PERSONAL SUMMARY

Software Engineer with 1.5+ years of experience building scalable backend services using Java, Spring Boot, and Node.js. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming, and time/space complexity analysis. Experienced in designing high-availability REST APIs, caching systems, and performance optimization. Exposure to LLM integration.

HIGHLIGHTS

- Built and shipped Android apps with **160K+ Play Store downloads**, proving real-world adoption.
- Creator of open-source **npm libraries**, including [SatyaMark](#) (AI content verification) and [PDF & PPT Export](#) (React utility for editable PDF/PPT generation).
- **HackWithInfy Finalist**, selected at a national level among thousands of participants.

SKILLS

Core: Java, Python, JavaScript, TypeScript, Data Structures & Algorithms, OOP, SOLID, Design Patterns, Time/Space Complexity

Development: Spring Boot, Node.js, REST APIs, WebSockets, React, Redux Toolkit, LLM Integration, LangChain, RAG

Databases & Tools: PostgreSQL, MongoDB, Redis, Docker, Git, Jenkins

EXPERIENCE

Infosys | Specialist Programmer– Software Development Engineer

Aug 2024 – Present

- Designed and implemented scalable RESTful services with **99.9% uptime**, following clean architecture and OOP principles.
- Improved API response time by **25%** through query optimization and efficient data handling.
- Implemented Redis-based caching for high-traffic endpoints, reducing data retrieval latency by **35%**.
- Owned end-to-end feature development from requirement analysis to deployment and post-release monitoring.

SaraITech | Software Engineer Intern

Jan 2024 – Jun 2024

- Developed modular REST APIs and improved system reliability through structured validation and exception handling.
- Integrated OAuth 2.0 authentication, increasing successful login rates by **25%**.
- Enabled near real-time communication using WebSocket-based messaging channels.
- Optimized resource utilization and asset delivery, reducing bandwidth usage by **35%**.

PROJECTS

SatyaMark

2025

- Designed modular LLM-based verification pipelines using Python and LangChain, implementing retrieval-augmented generation (RAG) workflows.
- Built backend APIs to orchestrate query generation, evidence retrieval, ranking, and summarization across multiple sources.
- Structured services using clean architecture principles to ensure scalability and maintainability.

PipelineX

2025

- Built a graph-based workflow engine enabling users to design modular automation pipelines.
- Implemented DAG validation and cycle detection to ensure correctness of execution flows.
- Optimized state management and node traversal logic for efficient updates in large workflow graphs.

FUSE

2025

- Built scalable backend services for a real-time social platform using Node.js and PostgreSQL.
- Implemented WebSocket-based messaging and optimized database queries for high read workloads.
