PERSONAL SUMMARY

Full Stack Developer with 1.5+ years of experience building and shipping scalable React and Node.js applications. Experienced in REST APIs, real-time systems, Redis caching, and performance optimization. Maintains open-source npm libraries, including an AI-powered verification platform using Python, LangChain, and RAG pipelines.

HIGHLIGHTS

- Built and shipped Android apps with **160K+ Play Store downloads**, proving real-world adoption.
- Creator of open-source **npm libraries**, including SatyaMark (AI content verification) and PDF & PPT Export (React utility for editable PDF/PPT generation).
- **HackWithInfy Finalist**, selected at a national level among thousands of participants.

SKILLS

Frontend: React, TypeScript, JavaScript, Redux Toolkit, React Query, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, REST APIs, WebSockets, Socket.IO, JWT, OAuth 2.0, Java, Spring Boot

Databases & Caching: PostgreSQL, MongoDB, SQL, Redis

AI / Python: Python, LangChain, Hugging Face, RAG pipelines, Search-augmented LLM pipelines

Platforms & Tools: Docker, Git, GitHub, Postman, Cloudinary, Vercel, Netlify, Render, Jenkins

EXPERIENCE

Infosys | Specialist Programmer– Software Development Engineer

Aug 2024 – Present

- Owned feature delivery end-to-end, from requirement analysis and API design to deployment and post-release monitoring, collaborating with cross-functional teams to ensure production stability.
- Designed and integrated RESTful APIs with **99.9% uptime**, reducing backend response times by **25%**.
- Implemented Redis-based caching for high-traffic endpoints, improving data retrieval latency by **35%**.
- Optimized frontend performance through efficient state management and code-splitting, reducing page load time from **3.5s to 2.1s**.

SaraITech | Software Engineer Intern

Jan 2024 – Jun 2024

- Built responsive, user-centric interfaces for a multi-user platform, improving UI load performance by **20%**.
- Integrated Google OAuth 2.0 authentication, increasing successful login rates by **25%**.
- Enabled near real-time UI updates by integrating REST APIs and WebSocket-based messaging channels.
- Optimized asset delivery using cloud storage and lazy loading, reducing bandwidth usage by **35%**.

PROJECTS

SatyaMark

2025

- Built an AI-powered content verification platform using Python, LangChain, Hugging Face models to classify text and images with confidence-based verdicts.
- Implemented search-augmented verification workflows that generate queries, retrieve evidence from ranked web sources, summarize results, and re-evaluate low-confidence claims using LLM-driven pipelines.
- Designed Node.js and Express.js APIs and integrated the system into React-based web applications via open-source npm and React SDKs, enabling production-ready adoption.

PipelineX

2025

- Built a full-stack drag-and-drop workflow builder using React Flow and JavaScript, enabling users to visually design and edit modular AI and automation pipelines.
- Designed a reusable node abstraction layer for easy creation of new node types, while managing complex graph state (nodes, edges) with Redux Toolkit, supporting single/multi-select, deselect, and bulk deletion.
- Improved reliability and UX with DAG validation to prevent invalid or cyclic flows, plus keyboard shortcuts, local persistence, and optimized re-rendering for smooth interaction.

FUSE

2025

- Built a real-time social media platform using React, Node.js, Express.js, and PostgreSQL with WebSocket and Socket.IO-based messaging.
- Implemented personalized feeds, efficient state management, and optimized API interactions, improving UI responsiveness and real-time content delivery.
